Cubic Efficiency

Analysis

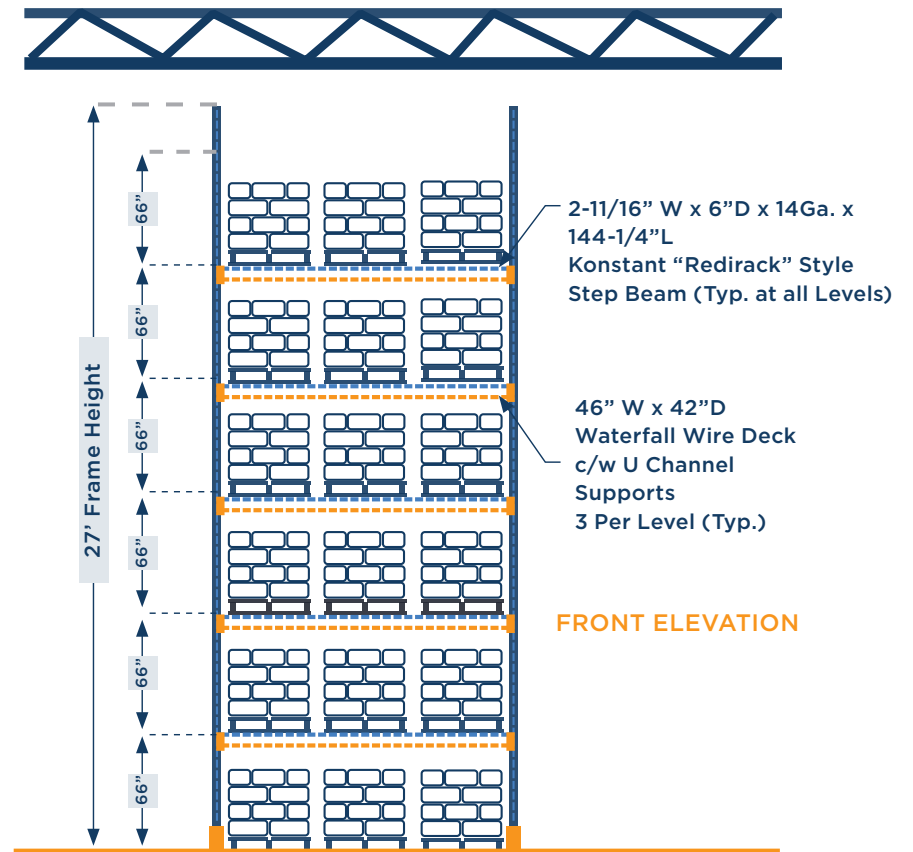

The 28' clear height at 350 Parkhurst Square supports an optimized narrow aisle selective racking layout accommodating 15,222 pallet positions (including over-dock storage) within 172,000 SF.

Alternative configurations, including VNA and double-deep, were tested; however, column interference reduced usable pallet positions, resulting in the narrow aisle selective layout delivering the highest net storage capacity.

Comparing 28' vs 18':

- Equivalent storage in an 18' clear facility would require approximately 115,000 SF of additional space (~40% larger footprint)

*Based on the engineered selective racking plan for 350 Parkhurst Square. Lower-clear comparisons are illustrative and assume similar rack configuration, pallet profile, and operating conditions; actual results will vary based on column spacing, staging, fire protection, and rack design.
