### SUSTAINABILITY

- Upgraded MEP systems nearly halved operating energy use
- Construction materials for base building and tenant spaces are thoroughly vetted to meet Durst's strict human health and environmental stewardship requirements
- Dynamic view glass windows on tower floors automatically tint to reduce glare, mitigate direct sun, and control heat gain
- Active chilled beams and finned tube radiators replaced perimeter convectors, taking advantage of natural hot/cold air movement to efficiently heat and cool the building

- Over 85% of the demolition and construction waste generated during 825 Third's renovation was diverted from landfill and incineration
- EPA WaterSense-labeled new plumbing fixtures promote water efficiency
- Certified LEED Gold-Building Design and Construction: Core and Shell
- Tenant recycling program and organics collection program for composting
- Use of green cleaning products, equipment, and strategies to promote a healthier work environment
- Renewable wind power is purchased to offset 100% of the building's electricity use
- Tenant-exclusive outdoor terrace

### POWER AND UTILITIES

#### HEATING

Heating water is generated with new high-efficiency natural gas-fired hot water condensing boilers. The new boiler plant and associated pumping equipment are located in the new prefabricated modular central plant.

#### COOLING

Dual temperature water is generated within the new prefabricated modular central plant and distributed to all building air handling units. When cooling is required, chilled water is sourced from the new high-efficiency chillers. When heating is required, hot water is injected from the primary hot water system.

All air handling units are updated with new dual temperature coils sized to maximize efficiency of the boiler and chiller plants.

### CHILLED BEAMS & FINNED TUBE RADIATORS

The replacement of 825 Third Avenue's combined heating/cooling induction units are among the improvements most visible and impactful to tenants and their guests. The original induction units — at nearly 3' tall and over 2' deep — consumed valuable floor space, limited access to windows, and restricted use of each floor's perimeter. The highly efficient HVAC system recently installed in the building replaces these induction units with ceiling-mounted active chilled beams and low-profile finned tube radiators — the combination of which will offer not only streamlined appearance, but recaptures up to 930 SF of floor area on podium floors and 600 SF of floor area on tower floors.

### LIFE SAFETY

The life safety generator supports the following loads: low-rise elevators, mid-rise elevators, high-rise elevators, fire alarm system, cellar mechanical equipment, fire pumps, fire booster pump, egress lighting, mechanical equipment on the 19<sup>th</sup> and 41<sup>st</sup> mechanical floors, IT equipment, plumbing equipment, heating systems, and freeze protection equipment.

### ELECTRICAL SYSTEM

Con Edison delivers electrical power to the building via a 277/480 V spot network located in the sidewalk vault. Power is then distributed throughout the building via pipe and wire risers.

The building's electrical distribution system is continuously maintained in accordance with national testing standards and applicable codes to provide the highest level of reliability. It is equipped with a sophisticated, web-enabled electrical sub-metering system that is used for tenant billing as well as system performance monitoring.

As standard tenant on-boarding procedure, in-house electrical engineers analyze new tenant designs and requirements to ensure sufficient electrical distribution is provided in accordance with the lease terms and building rules and regulations.

### TELECOMMUNICATIONS

The Durst Organization offers its tenants a range of telecommunication providers. Service providers currently available at 825 Third Avenue include:

- Wireless: Agreements with carriers in progress
- Telephone: Verizon, RCN
- Internet: Verizon Fios, Verizon Business Service, Astound by RCN, Crown Castle
- Television: RCN
