

# 600 SUMMER STREET

NEW PRE-BUILDS IN THE HEART OF STAMFORD

NEWMARK

# 600 SUMMER STREET

Centrally located in Stamford CBD. Walking distance to all downtown amenities, restaurants, shopping & more

## FEATURES

- › First building in the state of CT to be certified Platinum level rating by Wired Score
- › Amazing location with a Walk Score® of 95 with over 50 restaurants, shopping, theaters, hotels and more just steps away
- › Dedicated building shuttle service to the Stamford Transportation Center
- › The building is easily accessible from both I-95 and the Merritt Parkway
- › Ample Parking via a surface lot and covered lower-level parking garage
- › Numerous building upgrades and renovations have recently been made to the entranceway, main lobby, common areas, bathrooms and the elevator lobbies on each floor

## SPECIFICATIONS

<b>SPACE AVAILABLE:</b>	2nd Floor:	1,620 RSF*	Total RSF
	2nd Floor:	2,120 RSF*	3,740
	3rd Floor:	8,517 RSF**	
	5th Floor:	1,741 RSF*	Total RSF
	5th Floor:	6,468 RSF*	8,209
	6th Floor:	2,177 RSF	

\* Contiguous \*\* Divisible

**RENT:** \$29.50 gross + electric

**AVAILABILITY:** Immediate Occupancy

# WIRED CERTIFICATION

## 600 SUMMER STREET

600 Summer Street, Stamford, CT 06901

has been rated Wired Certified Platinum for its excellent connectivity.

Wired Certification, developed by WiredScore, champions cutting-edge technology in commercial real estate by providing the only certification for rating the connectivity of commercial buildings.

Arie Barendrecht  
CEO and Founder, WiredScore

WiredScore ID: 18439  
Certification expiration date: 3/4/2021

John Meko  
Director of Engineering, WiredScore

## AVAILABLE ISPS

Carrier	Cable Type	Network Type	Cable Distribution
Altice	Fiber	Type 1	Full Coverage
Comcast	Coaxial	Phone or Cable	Full Coverage
Crown Castle Fiber	Fiber	Type 1	Full Coverage
Frontier Communications	Copper	Phone or Cable	Full Coverage
Frontier Communications	Fiber	Type 1	Full Coverage
Windstream	Copper	Type 2	Direct to Tenant

## KEY FEATURES OF CONNECTIVITY

- › 3 fiber providers can provide dedicated, business grade internet access with guaranteed upload and download speeds.
- › Multiple Points of Entry on different sides of the building and diverse riser pathways allow tenants to have maximum redundancy to mitigate the risk of an outage.
- › Additional riser capacity is available to support future needs of tenants and ISP's throughout the entire building.
- › Telecom equipment is kept in a protected space, separate from other utilities reducing the potential for service disruption.
- › Management has documented agreements in place with carriers to support seamless and timely provision of services to tenants.
- › Telecom equipment is located above grade to prevent against damage from flooding.
- › Coaxial cabling can provide bundled phone, cable TV, and basic internet.
- › Dedicated risers are present to contain and protect telecom cables from risk of damage.

## WIRED CERTIFICATION FACT SHEET EXPLAINER

Cabling Type	Use	Maximum Speed (Bandwidth rates)
Copper	Used in older Digital Subscriber Line (DSL) networks, these networks use copper telephone lines to provide Internet access to customers.	40 Mbps Down 5 Mbps Up
Coaxial	Used in most Cable provider networks. Typically used for Television sets or Modems.	300 Mbps Down 30 Mbps Up
Fixed Wireless	Rooftop based antenna networks are used for both primary and secondary forms of connectivity. Top choice for redundant connection because it doesn't rely on existing wireline cabling into a building. Fixed Wireless should not be confused with Satellite Dishes which provide Television service and minimal Internet capabilities.	1000 Mbps (1 Gig) Up and Down
Fiber	Most technologically advanced form of cabling used in buildings. Signals can travel for greater distances at faster speeds.	10,000 Mbps (10 Gig) Up and Down

Distribution Type	Definition
Direct to Tenant Space Only	Carrier runs a single cable from where their equipment is located to the tenant they are servicing. This is not ideal for a tenant ordering new service as it could require extensive construction which will delay the tenant getting timely service.
Partial Distribution	Partial Distribution is defined as a distribution point every 6-10 floors. Carrier places several distribution points within the building where they can connect additional cables for tenants. A distribution point can either be a termination box or a coil of spare cabling. For new service requests, partial distribution is less time intensive than direct to tenant space cables.
Full Distribution	Carrier places distribution points (a termination box or a coil of spare cabling) every 5 floors or less and can easily serve any tenant in the building. This setup drastically reduces the time it takes for tenants to receive new service.

Network Type	Definition
Type 1	Carrier owns the fiber entering the building.
Type 2	Carrier is using someone else's fiber, copper or coax to reach a tenant.
Phone Company or CableNetwork	Carrier is entering the building with Copper Phone Cables or Coaxial Cables. These usually only offer slower Internet speeds.
Rooftop Connection	Rooftop connections are designated for Fixed Wireless providers. See definition above.
